

MILO RANGE FDU

MILO Range FDU

The Range Firearms Diagnostic Unit (FDU) is a revolutionary tool enabling instructors to watch key components of a shooter's technique and results on a computer screen, in real time, and for review with the student. The FDU captures the line-of-sight, trigger motion, posture & stance and the fall of shot for the entire training session. Once completed, the instructor can then review the entire session in normal video playback or frame-by-frame motion with the student. By synchronizing these key components for immediate review with the student, the relationships between them, and the technique flaws that cause shot inaccuracy immediately become clear to the trainee.

When they see the trigger motion as they ready the shot, the front sight dropping (anticipating recoil), and ultimately the low fall of the round, they witness the technique flaw and can immediately work to correct it. The entire session, complete with instructor commentary, can be reviewed immediately and/or exported to video DVD for trainee review at a later time.

The Range FDU can be used with dryfire, recoil and live fire training weapons.

The FDU System

The Range FDU system includes the FDU computer system, heads-up line of sight camera, point of impact camera, trainee camera, and trigger monitor for your firearm. The only thing not included is the firearm, safety gear and ammunition. The entire system comes in a one-man portable travel case and can be setup on a table top in less than 10 minutes.

Sight Picture

Uses patented MILO technology to allow simultaneous student and instructor view of the student's line of sight.

Trigger Motion

Utilizes a rail-mounted trigger motion sensor that records timing and distance of all trigger use.

Point of Impact

A camera with zoom lens allows real-time view of the fall of each shot.

Stance and Posture

A camera allows video from the student as well as audio of the entire training session to be captured.

To find out more about MILO Range FDU or any of our other interactive training systems visit us at www.milorange.com or call 1-800-344-1707

MILO RANGE FDU

The MILO Range FDU System Includes

- MILO Range FDU System
- Touchscreen operation
- MILO Trainee Viewpoint System
- MILO Trigger Pull Tracking device
- MILO FDU Connection Box
- Target camera with zoom lens
- Student camera
- Transport Case

Training, Warranty and Support

- 1 year complete system warranty
- 24/7 telephone support
- Train the trainer course
